

JTGGA CME/CPD CREDITING

Answer form for the article titled “Abnormal umbilical cord coiling and association with pregnancy factors” within the scope of CME/CPD

- 1. Which side of the umbilical cord typically experiences more spiral turns?**
 - a. Maternal part
 - b. Fetal part
 - c. Central part
 - d. No such association

- 2. Traditionally, umbilical cord coiling is called hypercoiled if the coiling index is above what percentile?**
 - a. Above 60th percentile
 - b. Above 70th percentile
 - c. Above 80th percentile
 - d. Above 90th percentile

- 3. Which of the following statements are true regarding the measurement of pulse pressures of the umbilical arteries and umbilical vein?**
 - a. Pulse pressures of the umbilical arteries and umbilical vein are 180° out of phase
 - b. During pulsations, arteries shorten and the diameter narrows
 - c. Venous diameter is increased
 - d. All the above

- 4. Which of the following statements are true regarding association of abnormal coiling of umbilical cord with advanced maternal age and gravida?**
 - a. Significantly not associated with maternal age or gravida
 - b. Significantly associated with maternal age, but not with gravida
 - c. Significantly associated with gravida, but not with maternal age
 - d. Significantly associated with both advanced maternal age and gravida

- 5. Why is it that abnormally coiled umbilical cords are not able to tolerate the stress of labor as that of normocoiled cords?**
 - a. Being more flexible and more prone to torsion
 - b. Being less flexible and more prone to rupture
 - c. Being less flexible and more prone to torsion
 - d. None of the above

- 6. Which of the following statements are true regarding umbilical cord?**
 - a. Coiling is only controlled by environmental factors
 - b. Coiling is not a natural tendency of the umbilical cord
 - c. Umbilical cord lengthens after delivery
 - d. Coiling is multifactorial

JTGGA CME/CPD CREDITING
